

**Supplemental Data:**

**Figure S1: Genotyping of TSP-1-KO mice**

Mouse genomic DNA was isolated from mouse tail, used for polymerase chain reaction (PCR) analysis with primers (5' tccaagtctccacccattgacg 3' and 5' ggctcatggcttgaccacagct 3'). A 400-bp band of PCR product indicates the TSP-1 gene deficiency compared to 700-bp PCR product for wild type.
