

Supplement Figure 1

Supplement Figure 1. The gene expression levels(A) and mRNA expression levels(B) in SK-MEL-1、 C918 、 A875 、 A375 human melanoma cells was determined by RT-PCR and qRT-PCR. (C) The expression of 4.1B in human melanoma was analysed from cBio Cancer Genomics Portal (<http://cbioportal.org>), which is an open-access resource for interactive exploration of multidimensional cancer genomics data sets.
