

Supplement Figure 1 miR-25 modulates apoptotic associated protein expression

(A) Immunoblotting showing that miR-25 overexpression prevented the DOX-induced increasing expression of Bax and decreasing expression of Bcl-2, whereas miR-25 repression exhibited contrast results. (B) Quantification of the relative results of Bax and Bcl-2 expression. (* $p < 0.05$, ** $p < 0.01$, compared with the control group, # $p < 0.05$, compared with DOX group. $n = 3$)
