Figure S1. Curves of the cumulative incidence function in the competing risk univariable analysis of the incidence of second primary malignancy (SPM) after kidney cancer.

Figure S2. (A-D) The receiver operating characteristic (ROC) curve and the area under the curve (AUC) of the developed model for predicting 3-, 5-, 7- and 10-year risk of developing second primary malignancy (SPM) risk in the training set. (E-H) The receiver operating characteristic (ROC) curve and the area under the curve (AUC) of the developed model for predicting 3-, 5-, 7- and 10-year risk of developing second primary malignancy (SPM) risk in the testing set.

Figure S3. (A-D) The calibration curves of nomogram for predicting 3-, 5-, 7- and 10-year probabilities of SPM in the training set. (E-H) The calibration curves of nomogram for predicting 3-, 5-, 7- and 10-year probabilities of SPM in the testing set.

Figure S4. Predictor screening through the Least absolute shrinkage and selection operator (LASSO) regression model. (A) According to the logarithmic (lambda) sequence, a coefficient profile was generated, and non-zero coefficients were produced by the optimal lambda. (B) LASSO regression analysis determines the number of factors to build a model.

Figure S5. (A-D) The calibration curves of nomogram for predicting 1-, 3-, 5- and 10-year Overall survival (OS) of kidney cancer patients with second primary malignancy (SPM) in the training set. (E-H) The calibration curves of nomogram for predicting 1-, 3-, 5- and 10-year OS of kidney cancer patients with SPM in the testing set.

Figure S6. DCA curves for the training set (A-D) and testing set (E-H).

Figure S7. The scatter plots of Mendelian randomization analyses. (A) Kidney cancer on gastric cancer; (B) Kidney cancer on colorectal cancer; (C) Kidney cancer on hepatocellular carcinoma; (D) Kidney cancer on lung cancer; (E) Kidney cancer on prostate cancer; (F) Kidney cancer on bladder cancer; (G) Kidney cancer on skin cancer; (H) Kidney cancer on thyroid cancer; (I) Kidney cancer on eye and adnexa cancer; (J) Kidney cancer on adrenal gland cancer; (K) Kidney cancer on pancreatic cancer.

Figure S8. The funnel plots of Mendelian randomization analyses. (A) Kidney cancer on gastric cancer; (B) Kidney cancer on colorectal cancer; (C) Kidney cancer on

hepatocellular carcinoma; (D) Kidney cancer on lung cancer; (E) Kidney cancer on prostate cancer; (F) Kidney cancer on bladder cancer; (G) Kidney cancer on skin cancer; (H) Kidney cancer on thyroid cancer; (I) Kidney cancer on eye and adnexa cancer; (J) Kidney cancer on adrenal gland cancer; (K) Kidney cancer on pancreatic cancer.

Figure S9. The forest plots of Mendelian randomization analyses. (A) Kidney cancer on gastric cancer; (B) Kidney cancer on colorectal cancer; (C) Kidney cancer on hepatocellular carcinoma; (D) Kidney cancer on lung cancer; (E) Kidney cancer on prostate cancer; (F) Kidney cancer on bladder cancer; (G) Kidney cancer on skin cancer; (H) Kidney cancer on thyroid cancer; (I) Kidney cancer on eye and adnexa cancer; (J) Kidney cancer on adrenal gland cancer; (K) Kidney cancer on pancreatic cancer.

Figure S10. The leave-one-out plots of Mendelian randomization analyses. (A) Kidney cancer on gastric cancer; (B) Kidney cancer on colorectal cancer; (C) Kidney cancer on hepatocellular carcinoma; (D) Kidney cancer on lung cancer; (E) Kidney cancer on prostate cancer; (F) Kidney cancer on bladder cancer; (G) Kidney cancer on skin cancer; (H) Kidney cancer on thyroid cancer; (I) Kidney cancer on eye and adnexa cancer; (J) Kidney cancer on adrenal gland cancer; (K) Kidney cancer on pancreatic cancer.
